AR GAME FOR LEARNING DIGITAL SKILLS IS READY IN 7 LANGUAGES

The project DIVO (Digital Evolution - The Journey) is an Erasmus+ adult education project that aims to develop and support the basic digital capacity and abilities of low skilled adults in the digital world. It aims to present learning environments with an innovative approach to adult groups such as the elderly, unemployed and others without basic digital skills. Therefore, we have created a digital game in AR (augmented reality) environment to familiarise them with the world of internet and online features.

DIVO project is a partnership between France, Finland, Turkey, Spain, Sweden and Lithuania and the app will be available in these languages and English.
