

TECHNICAP PPS 4/3 Sediment Traps

Sediment traps collect settling particles in the sea. The collected samples allow determination of downward mass fluxes of particles and associate elements (e.g., C, N, P), or trace elements and pollutants.

- Automatically collect and seal descending particles from ambient water from 1 to 12 consecutive particle samples
- Collecting area 0,05 m²
- Volume of sampling bottles 500 ml
- Sampling interval 1 min →
- Maximum operating time 18 months
