

DeepTrekker DTG2 ROV

Remotely operated subsurface camera

This small subsurface vehicle is suited for simple inspection of underwater installations at a depth of up to 125 meters.

With an optional gripper it can also be used to retrieve objects of suitable shape and size.

- The extra long 300 m control cable may allow the ROV to be operated from ashore
- Operating time 4-6 h
- Optional accessories: A simple gripper claw, a higher resolution (4k) camera
- The simple construction limits the mobility of the device, requiring some practice before actual use
