

FlowCam

Imaging particle analyzer

Target organisms: phyto- and microzooplankton. Size range: ~10-1000 μm FlowCam can quickly take colored pictures of particles in the water, providing fast enumeration and characterization of particles (shape, size, color).

- Bench top instrument
- Peristaltic pump
- Can be used in auto imaging or trigger mode (particles containing chlorophyll a or phycoerythrin)
- Can be used for live or fixed material
- Link to more technical details and specifications on the [manufacturer's web page](#)
- Contact Lumi Haraguchi, Kaisa Kraft (firstname.surname@syke.fi)
