Progress Developer Studio for OpenEdge

OpenEdge 12.0 – Evolution Tooling

- Coding:
 - Execute FINALLY blocks during STOP processing
 - Set a return code on application exit
- Compilation:
 - Supply Progress Compilation Tools (PCT)
 - Prevent Methods/Functions with no RETURN,
 - Prevent RETURN from inside a FINALLY block
- Upgraded Eclipse to version 4.9
 - Exploring Che for hosted development

Developer Studio

- Performance Profile Enhancements
 - Show true call-tree data and PROPATH
- Exporting/Importing Workspace Settings
- New ABL Editor Options
 - Code formatting
 - Compile Shortcut
 - Refactoring
- 3rd Party Enhancements
 - Code analyzer for ABL
 - Progress Compilation Tools (PCT) Update
 - Infragistics Controls Update
- Telerik UI for Winforms Controls Upgrade

OpenEdge 12.0 – Evolution Tooling

- Improve ABL code quality as early as possible in the dev cycle
- SonarQube ABL plug-in for code inspection
- Integrated into PDS for OpenEdge
- Extensible

Application Migration and Development Guide
Migrating AppServer and WebSpeed Applications : Introduction

Introduction

Migrating an application from the classic OpenEdge AppServer or the WebSpeed Transaction Server to the Progress Application Server for OpenEdge (PAS for OpenEdge) should involve minimal changes to ABL application code. However, an OpenEdge application may encompass many distributed components including AppServers, Adapters, various types of OpenEdge and non-OpenEdge clients, NameServers, and so forth. In fact, an application may actually be composed of multiple ABL applications, where an ABL application is identified by a unique ABL code base, AppServer, and database.

Therefore, the process of migrating an application to use PAS for OpenEdge instead of the classic OpenEdge AppServer or WebSpeed Transaction Server can be more involved than just moving the ABL code base and database configurations. PAS for OpenEdge is based on a server platform that is entirely different from the classic OpenEdge AppServer. PAS for OpenEdge is, however, designed for use with both current and future applications, with backwards compatibility to ease the burden of migrating current applications.

OpenEdge AppServer

When migrating an ABL application from the OpenEdge AppServer to PAS for OpenEdge, changes to the application should be minimal. However, it is helpful to be aware of the following considerations:

- **PAS for OpenEdge installation compared to the AppServer** – Unlike the classic AppServer, OpenEdge business applications do not run in the PAS for OpenEdge that you install as part of the OpenEdge installation. Instead, applications run in one or more *PAS for OpenEdge instances* that you create from your OpenEdge PAS for OpenEdge installation as a template. Among other benefits, this means that when you upgrade OpenEdge, you do not lose your previous PAS for OpenEdge instances, as you do any local AppServer instances that you must restore from backup after upgrading.
- **Migrating to PAS for OpenEdge development and production servers** – OpenEdge supports two different types of PAS for OpenEdge installation, a development server where you develop ABL business applications, and a production server where you can deploy business applications that are ready for release. You can develop ABL business applications in a PAS for OpenEdge project that you create in Progress Developer Studio for OpenEdge much as you do in an AppServer project for the classic AppServer. However, unlike the classic AppServer, you cannot deploy non-compiled ABL source code to a PAS for OpenEdge production instance, because, as a security feature, the PAS for OpenEdge production server has no ABL compiler. Therefore, to a PAS for OpenEdge production server you can only deploy compiled r-code.
- **Client connections compared to the AppServer** – There is no direct or "native mode" connection to PAS for OpenEdge from an ABL client (and a Java or .NET Open Client) as there is to the classic AppServer. Because PAS for OpenEdge is a Web server, all clients of PAS for OpenEdge are Web clients and must connect using an HTTP or HTTPS URL to a PAS for OpenEdge Web application (an *OE ABL Web application*). This connected OE ABL Web application then manages the execution of all server ABL code on behalf of all supported OpenEdge clients.
- **Supported client types and transports in PAS for OpenEdge** – For PAS for OpenEdge, there are no separate adapters (like the WSA or the AIA for the classic AppServer) to allow different types of OpenEdge clients to access an OE ABL Web application over the Internet. Instead, every OE ABL Web application supports up to three separate transports that provide access for the following types of PAS for OpenEdge clients:
 - **ABL clients (and Java or .NET Open Clients)** – Using the OpenEdge APSV transport
 - **SOAP Web service clients** – Using the OpenEdge SOAP transport

Diligent Dan

Age: 20's
Occupation: Back-End Developer for Digital Agency
Family: Single
Lifestyle: Lives and works in downtown Toronto.

GOAL:
 To produce clean and reliable code, to complete my tasks within the estimated time period, to meet all customer requirements, and to please both the client and my management.

MEMORABLE QUOTE
 "SupportLink is a total disaster! Entering a support ticket is so painful."

MEMORABLE QUOTE
 "The documentation is all over the place. I have to piece all of this information together that I find in different articles, on the forum, KB articles... sometimes I feel like banging my head against the wall."

Personas and Journey Maps

	Exploration	Development-Project #1	Side project – Project #2	Development - Project #1	Customer Escalation
ACTIONS	<ul style="list-style-type: none"> Asks manager for Sitefinity course(s) Gets overview of SF from peer Searches for free courses online Reads description of Falafel courses Searches for documentation, videos, just to see what is available Bookmarks docs.sf.com Watches some videos 	<ul style="list-style-type: none"> He meets with manager about his assigned tasks, requirements, and timelines. He has a few preliminary team planning meetings. He starts to code He has questions about a specific topic He uses his docs.sf.com bookmark, and looks for the topic – he sees the Widgets doc section and clicks on it since widgets are relevant to the topic. He sees mostly links and some text. He starts to read and click on the links in the Widget section, reading and clicking, reading and clicking. He clicks on a link in the Widget section that takes him to the Thunder section Via the search field, he searches for and then looks at docs in the Architecture section and the Feather section that are also relevant to his topic. 	<ul style="list-style-type: none"> He meets with his manager about a side project, (he must migrate Sitefinity from a dev to a staging environment, and then deploy from the staging environment to a load balanced product environment using SiteSync) He googles for info on topic and finds 3 relevant documents: <p>https://docs.sitefinity.com/deployment</p> <p>https://docs.sitefinity.com/deploy_projects_to_shared_hosting</p> <p>https://docs.sitefinity.com/configure_the_links_to_host_sitefinity_projects</p>	<ul style="list-style-type: none"> Continues to work on Project #1 Has questions about a specific topic and googles for answer Clicks on first search match which takes him to document on docs.sf.com. He reads doc but does not find answer He searches within docs.sf.com but does not find answer He googles again and clicks on forum link. He looks at abundance of info on forums, much of it outdated. He finds posting from someone who asked question he has but answer was emailed to poster and not posted on forum He googles again and clicks on 3rd search match which takes him to KB articles 	<ul style="list-style-type: none"> While he is still working on Projects #1 and 2, he meets with his manager about a customer escalation issue for a live site that his manager has assigned to him He explores the issue and tries out various solutions, to no avail. He discusses the issue with his peers and his management. He shows them the solutions he has tried. After various unsuccessful attempts by his manager and peers to solve the issue he will need to open a support ticket. He attempts to access SupportLink, and enters and submits a ticket.

	TOUCHPOINTS
	<ul style="list-style-type: none"> His manager and peer Sitefinity product Google search term matches Sitefinity.com site, docs.sf.com Videos

	FEELINGS
	<ul style="list-style-type: none"> Excited to work on SF project after working on other CMS projects Grateful for overview of SF from peer Disappointed that there is no funding for courses, especially after reading Falafel course description on SF site Annoyed that hard for him to find docs' section on Sitefinity.com (does not associate "Support" with documents – associates it with Tech Support/people to contact for help)

	EMOTIONS

	OPPORTUNITIES
	<ul style="list-style-type: none"> Provide pre-recorded SF basic course for free (for different roles) Send email to all developers on customer team with personalized list of suggested courses, videos, webinars... free learning plan. Send weekly/monthly personalized bundles of doc titles and links/video descriptions and links/tips and tricks/best practices Consider doing what Pavlik does – 30 minute daily call to take questions from people who call in Change name of main menu item from "Support" to something that users will associate with Documentation – do moderated usability testing with users to understand more about this issue and then usability test options. Provide transcripts with videos

SF Journey Map Partner Client: Content Editor – Manager Editor, Digital Publications & Public Relations at Illinois Dental Association (IDA)

Collaborative Cathy

Age: 50's
Occupation: Managing Digital Editor for Illinois Dental Association
Family: Married
Lifestyle: Lives and works in small, quiet town, about 50 miles north of Chicago. Cathy and her partner own an alternative bookstore, which her partner runs.

GOAL:
 I need to keep our online publications and my section of the Association website populated with new and compelling content. I have daily and quarterly drop-dead dates, and it can be tough juggling the overlapping deadlines.

MEMORABLE QUOTE
 "There is nothing more exciting than the creative process of writing content that both engages and informs the reader."

MEMORABLE QUOTE
 "Sitefinity is my new normal"

	Informed	Mentally Prepares	Motivated	Learns	Uses Skill to Edit Content
ACTIONS	<ul style="list-style-type: none"> Attends All Hands meeting – Hears about plan to switch to new CMS Sitefinity system in 6 months, and design new website in the process. CEO and Department Head talk about how wonderful this will be, and that they will use Sitefinity Premier Partner Axiom to help with this work. After meeting, talks to Web Project Manager Joe, and to Product Manager Sally, who have both been assigned to the Sitefinity project. They reiterate the benefits of Sitefinity, and are very excited about working with Axiom. Talks to her direct reports about the fact that they will need to learn a new system for updating, deleting, and posting new content. 	<ul style="list-style-type: none"> Googles, looking for any learning materials on Sitefinity. Finds video and watches part of it before she is called into a meeting. After meeting, continues to watch video but stops when a colleague drops by to chat. She receives an email requesting that content owners delete all outdated content from their current CMS during the next few months. She casually chats with her direct reports who are in adjacent cubicles to pass on this request. 	<ul style="list-style-type: none"> After several months, she receives an email about the training schedule. The training will be delivered by Joe. The training has been scheduled during the week of her vacation, and before the week of a week-long conference she will attend. She reschedules her vacation She searches for and looks at Sitefinity online materials for new users again. Her search directs her to a forum site. She talks to anxious direct reports who drop by and reassures them that they will learn together. 	<ul style="list-style-type: none"> She takes internal training for Sitefinity with her direct reports During lunch, she reassures overwhelmed direct reports. She checks her email and replies to urgent requests. After the 8 hour training session, she checks her email again, replies to a few more, and drives home. During the drive home, she stops at McDonalds for a quick meal – it is already 7 pm. She helps her kids with their homework, says hello to her partner, and spends 2 hours working, and another hour reviewing course materials. 	<ul style="list-style-type: none"> Two weeks later, after the content has been successfully migrated to Sitefinity, and the website goes live, she and her direct reports attempt to edit content on the new site. She reviews her users manual to refamiliarize herself with Sitefinity. She successfully uploads and formats new content, and edits current content. Before she leaves for the day, she attempts to duplicate a form, and the system throws an error. She consults her course manual and does not find an answer. She googles and she clicks on a link for Sitefinity form documentation. She reads the documentation and cannot find the answer to her question She contacts the Web Manager Joe, but he has gone home for the day. She leaves the office at 7, gets a McDonalds meal, and goes home.

OpenEdge 12: Powering Tomorrow's Evolution

DATA SHEET

Keeping Pace with Advancing Technology

Today, technology is advancing so fast that applications are having a difficult time keeping pace. Trends such as cloud, responsive web, mobile, predictive analytics, and APIs cause the business to constantly assess its technology and business strategy. This often means necessary updates to the application.

OpenEdge 12: Crucial to App Evolution

Evading your application to continuously provide value to the business, leverage your investment in the core logic, and pave the way for future innovation, can be a complex but necessary undertaking to continue to thrive in today's ever-evolving business environment.

OpenEdge 12 provides the performance, availability, agility and security you need to facilitate your application evolution effort. OpenEdge 12 helps you easily pivot to meet market demands, scale as your business does, and dramatically improve performance, allowing the organization to accelerate time to market, increase efficiencies, save expenses, increase availability and continue to compete effectively.

OpenEdge 120 provides the agility you need to facilitate your application evolution to meet and exceed the growing demands of your market.

OpenEdge 12: Quickstart Evaluation

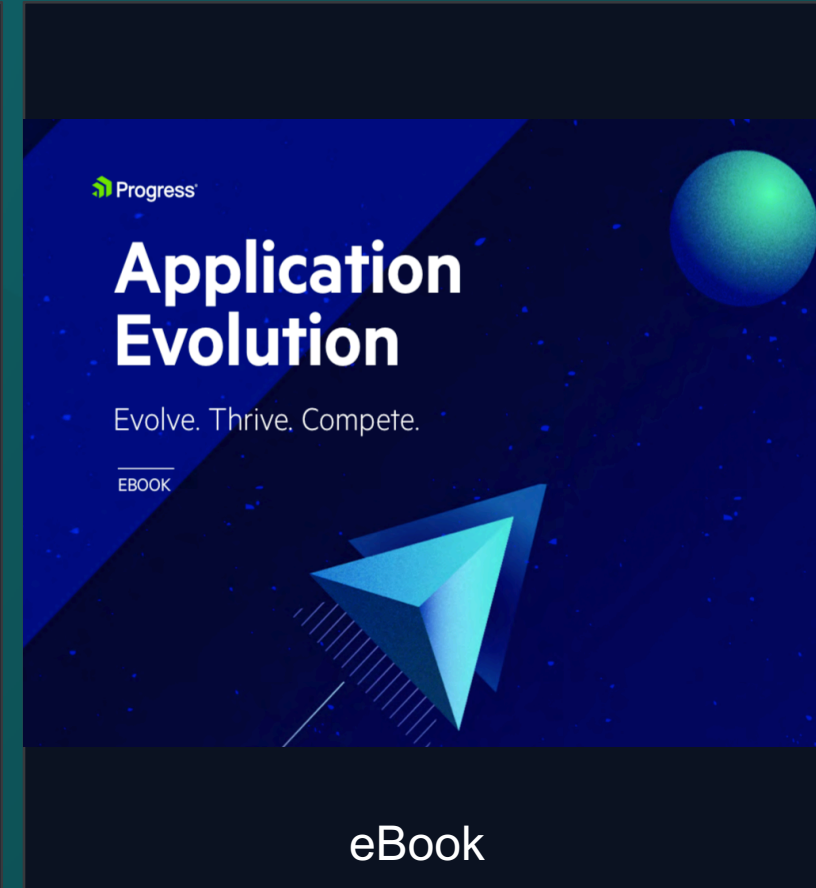

DATA SHEET

OpenEdge 12 is the most secure, available and performant version of Progress ever released. All businesses can benefit from the significant performance, availability and security enhancements delivered in OpenEdge 12. But because of Progress customers' and partners' applications are deployed in a wide variety of versions, platforms, and configurations, a complete evaluation of the application architecture, coding practices, and security practices is necessary to determine the best course of action to leverage the benefits of OpenEdge 12. Let the experts from Progress Services evaluate your needs and recommend the best strategy to move forward.

This four-hour Quickstart Evaluation will enable an effective upgrade strategy that can be implemented to best achieve your particular business goals in the most cost-effective and timely manner. The following application components will be evaluated and best practice recommendations provided:

Services Quickstart Eval.
